

Progress Report

- Finalized Concept Design
 - took out concept of curriculum
 - took out pageObject model
 - tried to simplify model while keeping all important functionality
 - One submission per question instead of per page
- Implementation
 - implemented most MVP functionality
 - remaining to implement:
 - teachers viewing grades
 - ability to remove/edit minilessons, pages, or questions
 - changed MVP to be just teachers being able to download a csv with grades rather than view a separate page with summaries, etc
 - using a general link rather than embedded video

Agenda

1. Go over progress report
2. Get feedback on updated data model and changes that were made
3. Get feedback on website so far (views, user flow, functionality included)
4. Ask about grades / submissions expectations for MVP
5. Ask about expectations for final project

Minutes

- good concept design
- went through implementation, current and remaining for MVP
- “checked out” mvp, not official demo
 - feedback:
 - good functionality
 - good UI
 - embed video package
- Went through rubric
 - separation of concerns
 - use of idioms
 - typical 6.170 stuff
- For the final
 - include add/remove (edit doesn't really matter)
 - videos
 - unit tests!!!
 - text blurb before resource
 - name a resource
 - grades page
 - expectations:
 - be able to look at student grades, which questions they got right and wrong
 - optional: graph.js, google graphing library, d3.js (a tad low level)
 - security mitigations
 - editing functionality the same as creating just the body is undefined
